

# The trajectory-aware criterion -- kern\_cd\_flat on sorting

289 cells, the same grid and the same cached FIPER evaluations as logdet\_kernel. Headline TWA at the median heuristic 0.560, at the original criterion's pick 0.584, at the rewritten one's 0.569, at the best cell 0.622.  $C = 1/2$  along the top edge is the action channel going inert, which is the degeneracy the contrast term exists to reject.

- ✖ median heuristic
- original criterion (A0)
- rewritten criterion (A4)
- best TWA in the grid
